

# Starting With Terminal Command

Dash -> Search for Terminal

Keyboard Shortcut: Ctrl + Alt + T

COMMAND	Description
The tilde (~) symbol	stands for your home directory. If you are <i>user</i> , then the tilde (~) stands for <i>/home/user</i>
pwd	<b>pwd</b> command will allow you to know in which directory you're located ( <b>pwd</b> stands for "print working directory").
tty	This command display your terminal name. For example: <i>/dev/pts/10</i> means this file name 10 is under in <i>/dev</i> directory nd <i>pts</i> directory.
uname	<ul style="list-style-type: none"><li>• The <b>uname</b> command gives the operating system name.</li><li>• <b>uname</b> with the <b>-a</b> option prints all system information, including machine name, kernel name &amp; version, and a few other details. Most useful for checking which kernel you're using.</li></ul>
who	The Who command displays an informative listing of users who are logged on the system
who am i	This command displays an information of user who currently logged on the system
help	<b>--help</b> is also used for helping a command For example, " <b>mv -help</b> " will bring up the <b>mv</b> (move) manual with all option. Virtually all commands understand the <b>--help</b> option which will produce a short usage description of the command and it's options,
Man	Linux have a man (manual) file, for every command, so finding them is as simple as typing " <b>man "command"</b> " to bring up a longer manual entry for the specified command.  For example, " <b>man mv</b> " will bring up the <b>mv</b> (move) manual. Then exit back to the command prompt. Move up and down the man file with the arrow keys, and quit back to the command prompt with " <b>q</b> ".
env	<b>env</b> is a shell <b>command</b> for <b>Linux</b> , Unix, and Unix-like operating systems. It can be used to print a list of the current environment variables, or to run another program in a custom environment without modifying the current one.
exit	To Exit from the terminal

hostname	This command displays the machine name
id	<b>id command</b> is <b>command</b> which can print real and effective User <b>ID</b> (UID) and Group <b>ID</b> (GID). An UID is a single identity for a user. While Group <b>ID</b> (GID) can consist more than one UID.
passwd	The <i>passwd command</i> is used to change the <i>password</i> of a user account. A normal user can run <i>passwd</i> to change their own <i>password</i> , and a system administrator (the superuser) can use <i>passwd</i> to change another user's <i>password</i> , or define how that account's <i>password</i> can be used or changed.
clear	To clear the screen.
chmod	<p>The command name chmod stands for "change mode", and it is used to define the way a file can be accessed. What Are File Permissions, And How Do They Work?</p> <p><b><u>NOTE:-Same as Unit-3 Notes</u></b></p>
du	<p>The <b>du</b> command displays the disk usage for a directory. It can either display the space used for all subdirectories or the total for the directory you run it on. Example:</p> <pre>user@users-desktop:~\$ du /media/floppy 1032    /media/floppy/files 1036    /media/floppy/ user@users-desktop:~\$ du -sh /media/floppy 1.1M    /media/floppy/</pre>
cd	<ul style="list-style-type: none"> <li>• The <b>cd</b> command will allow you to change directories. When you open a terminal you will be in your home directory. To move around the file system you will use <b>cd</b>. Examples: <ul style="list-style-type: none"> <li>• To navigate into the root directory, use "<b>cd /</b>"</li> <li>• To navigate to your home directory, use "<b>cd</b>" or "<b>cd ~</b>"</li> <li>• To navigate up one directory level, use "<b>cd ..</b>"</li> <li>• To navigate to the previous directory (or back), use "<b>cd _</b>"</li> <li>• To navigate through multiple levels of directory at once, specify the full directory path that you want to go to. For example, use, "<b>cd /var/www</b>"</li> <li>• As another example, "<b>cd ~/Desktop</b>" will move you to the Desktop subdirectory inside your home directory.</li> </ul> </li> </ul>
version	<p><b>lsb_release -a:</b> The <b>lsb_release</b> command with the <b>-a</b> option prints version information for the Linux release you're running, for example:</p> <pre>user@computer:~\$ lsb_release -a</pre> <p>No LSB modules are available.</p>
